Scott Hunter

Director of Languages and Platforms, Microsoft

I joined Microsoft in 2007 working on ASP.NET, in 2010 I moved to Azure to work on making .NET work great in Azure and then in 2016 I moved into DevDiv to work on all of .NET.

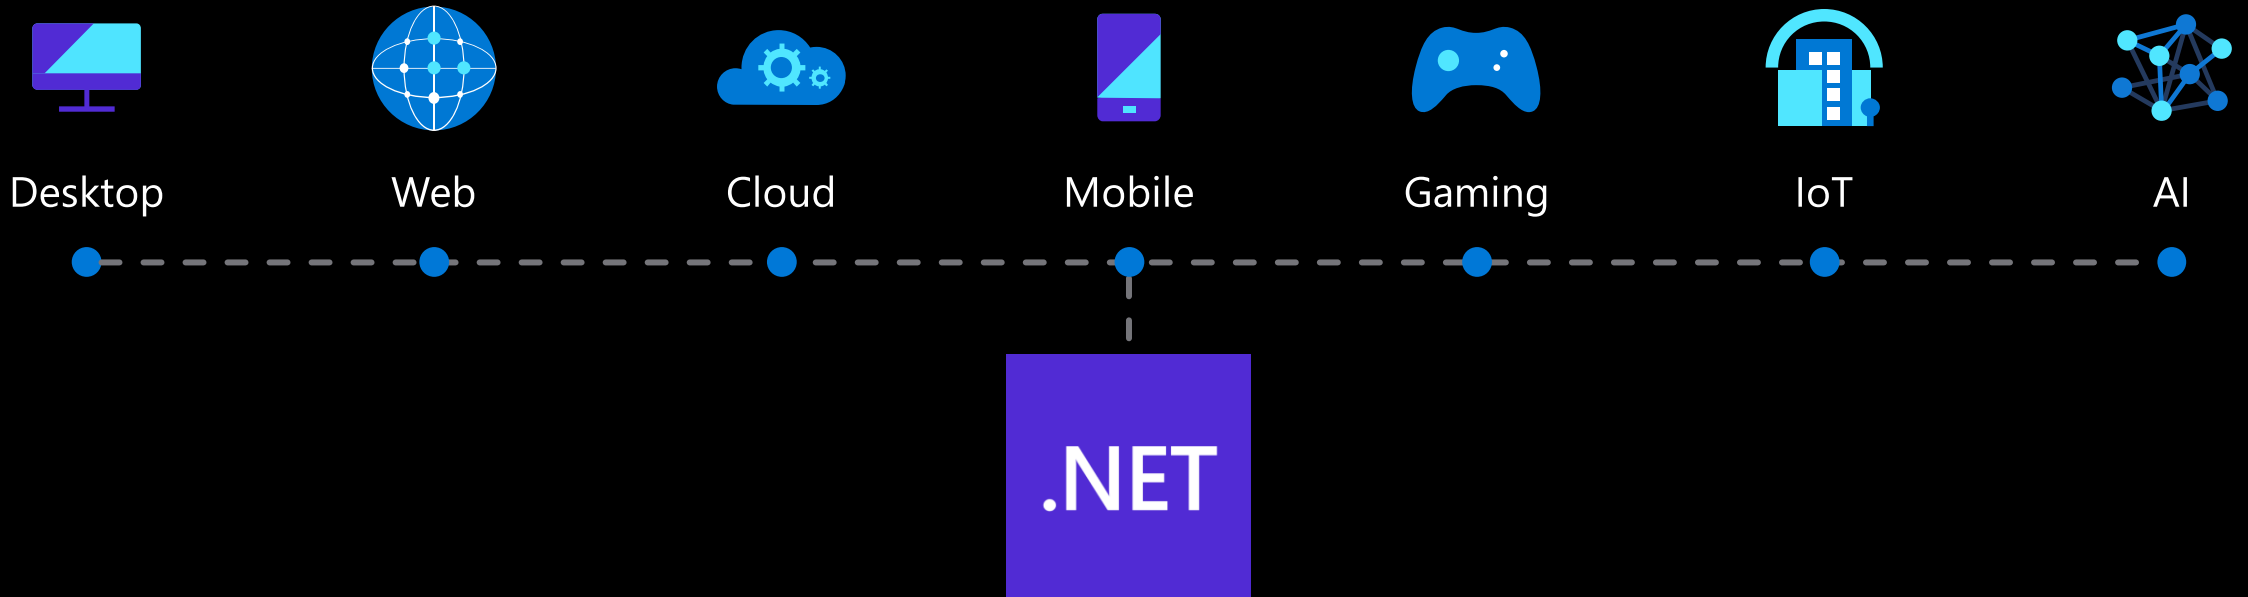

Today my team works on .NET, C#, F#, VB.NET and .NET Tooling. My team also works on Microsoft Open JDK and C++.

Flexible deployment

Unparalleled performance

Reduced infrastructure & hosting costs

Modern, innovative languages and APIs

PREVIEW

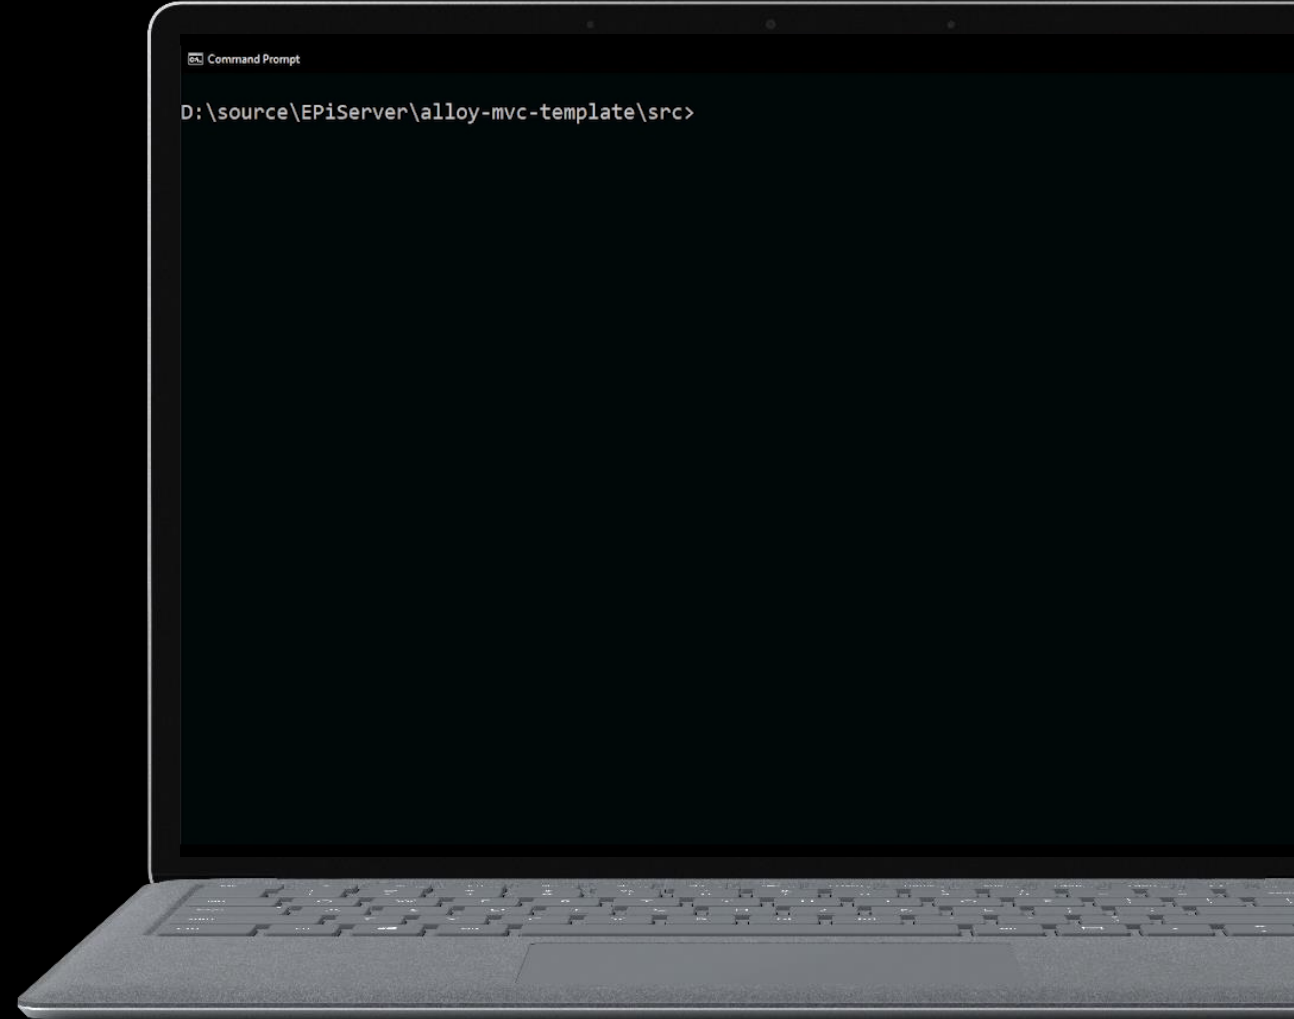

.NET Upgrade Assistant

Reduce time and difficulty modernizing older .NET codebases

Guided, step-by-step experience

Multiple project types supported

Learn more | aka.ms/dotnet-upgrade-assistant

Demo – Upgrade Assistant

One .NET - .NET 6

Single SDK, one BCL, unified toolchain

Cross-platform native UI

Cross-platform web UI

Cloud native investments

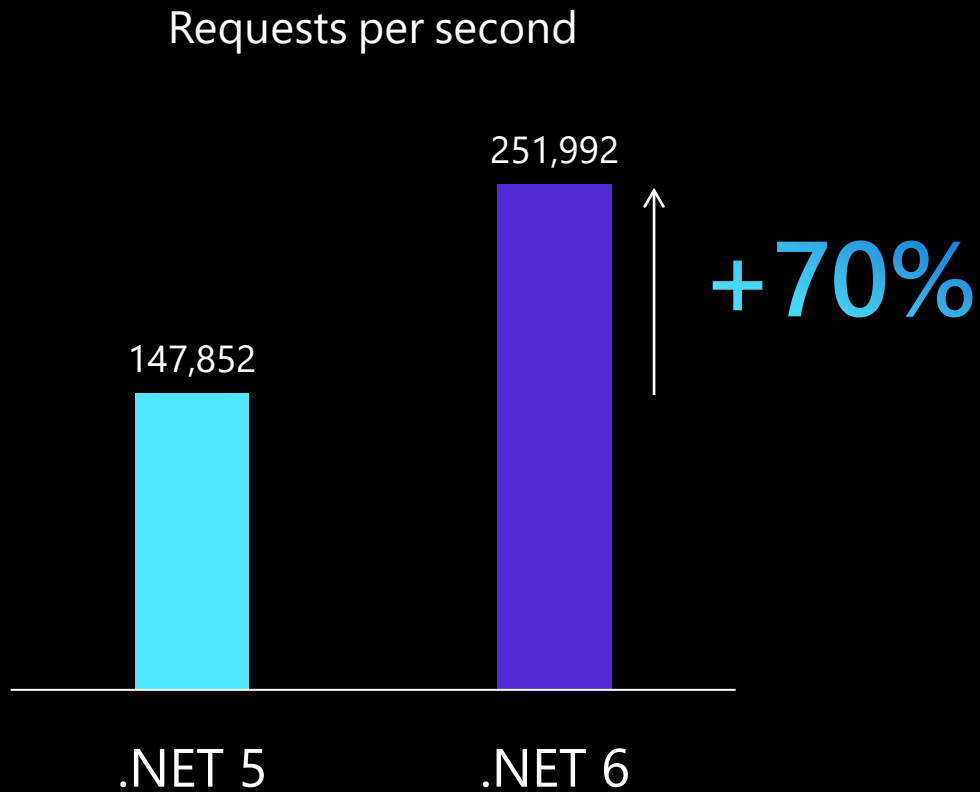

Performance & productivity improvements

**.NET has the best of breed solutions for all modern workloads
in a single, unified development platform**

.NET 6 main features

- Simplify and write less code with C# 10
- .NET Multi-platform App UI for native mobile & desktop apps
- Blazor desktop web apps with native device capabilities
- Minimal web APIs for cloud native apps
- More device targets including Apple M1
- Windows Forms and WPF on ARM64 & Single file EXE deployment
- Developer productivity enhancements like hot reload
- Continued performance improvements in runtime and build time

Entity Framework Core performance

Tests done in-house on the same hardware as
TechEmpower Fortunes benchmark

Many optimizations within EF Core

70% faster with .NET 6

31% faster query performance

Up to 43% reduced memory allocation

Simplify your code with C# 10

```
global using System;

namespace Model;

public record struct Person
{
    public required string Name
    {
        get;
        init => field = value.Trim();
    }
}
```

Many syntactic simplifications, less boilerplate

Record structs

Improvements to lambdas and auto-properties

General availability in .NET 6

Minimal web APIs for cloud native apps

```
var app = WebApplication.Create(args);  
app.MapGet("/", () => "Hello World!");  
app.Run();
```

Lightweight, single-file, cloud native APIs

Low ceremony, top-level C# programs

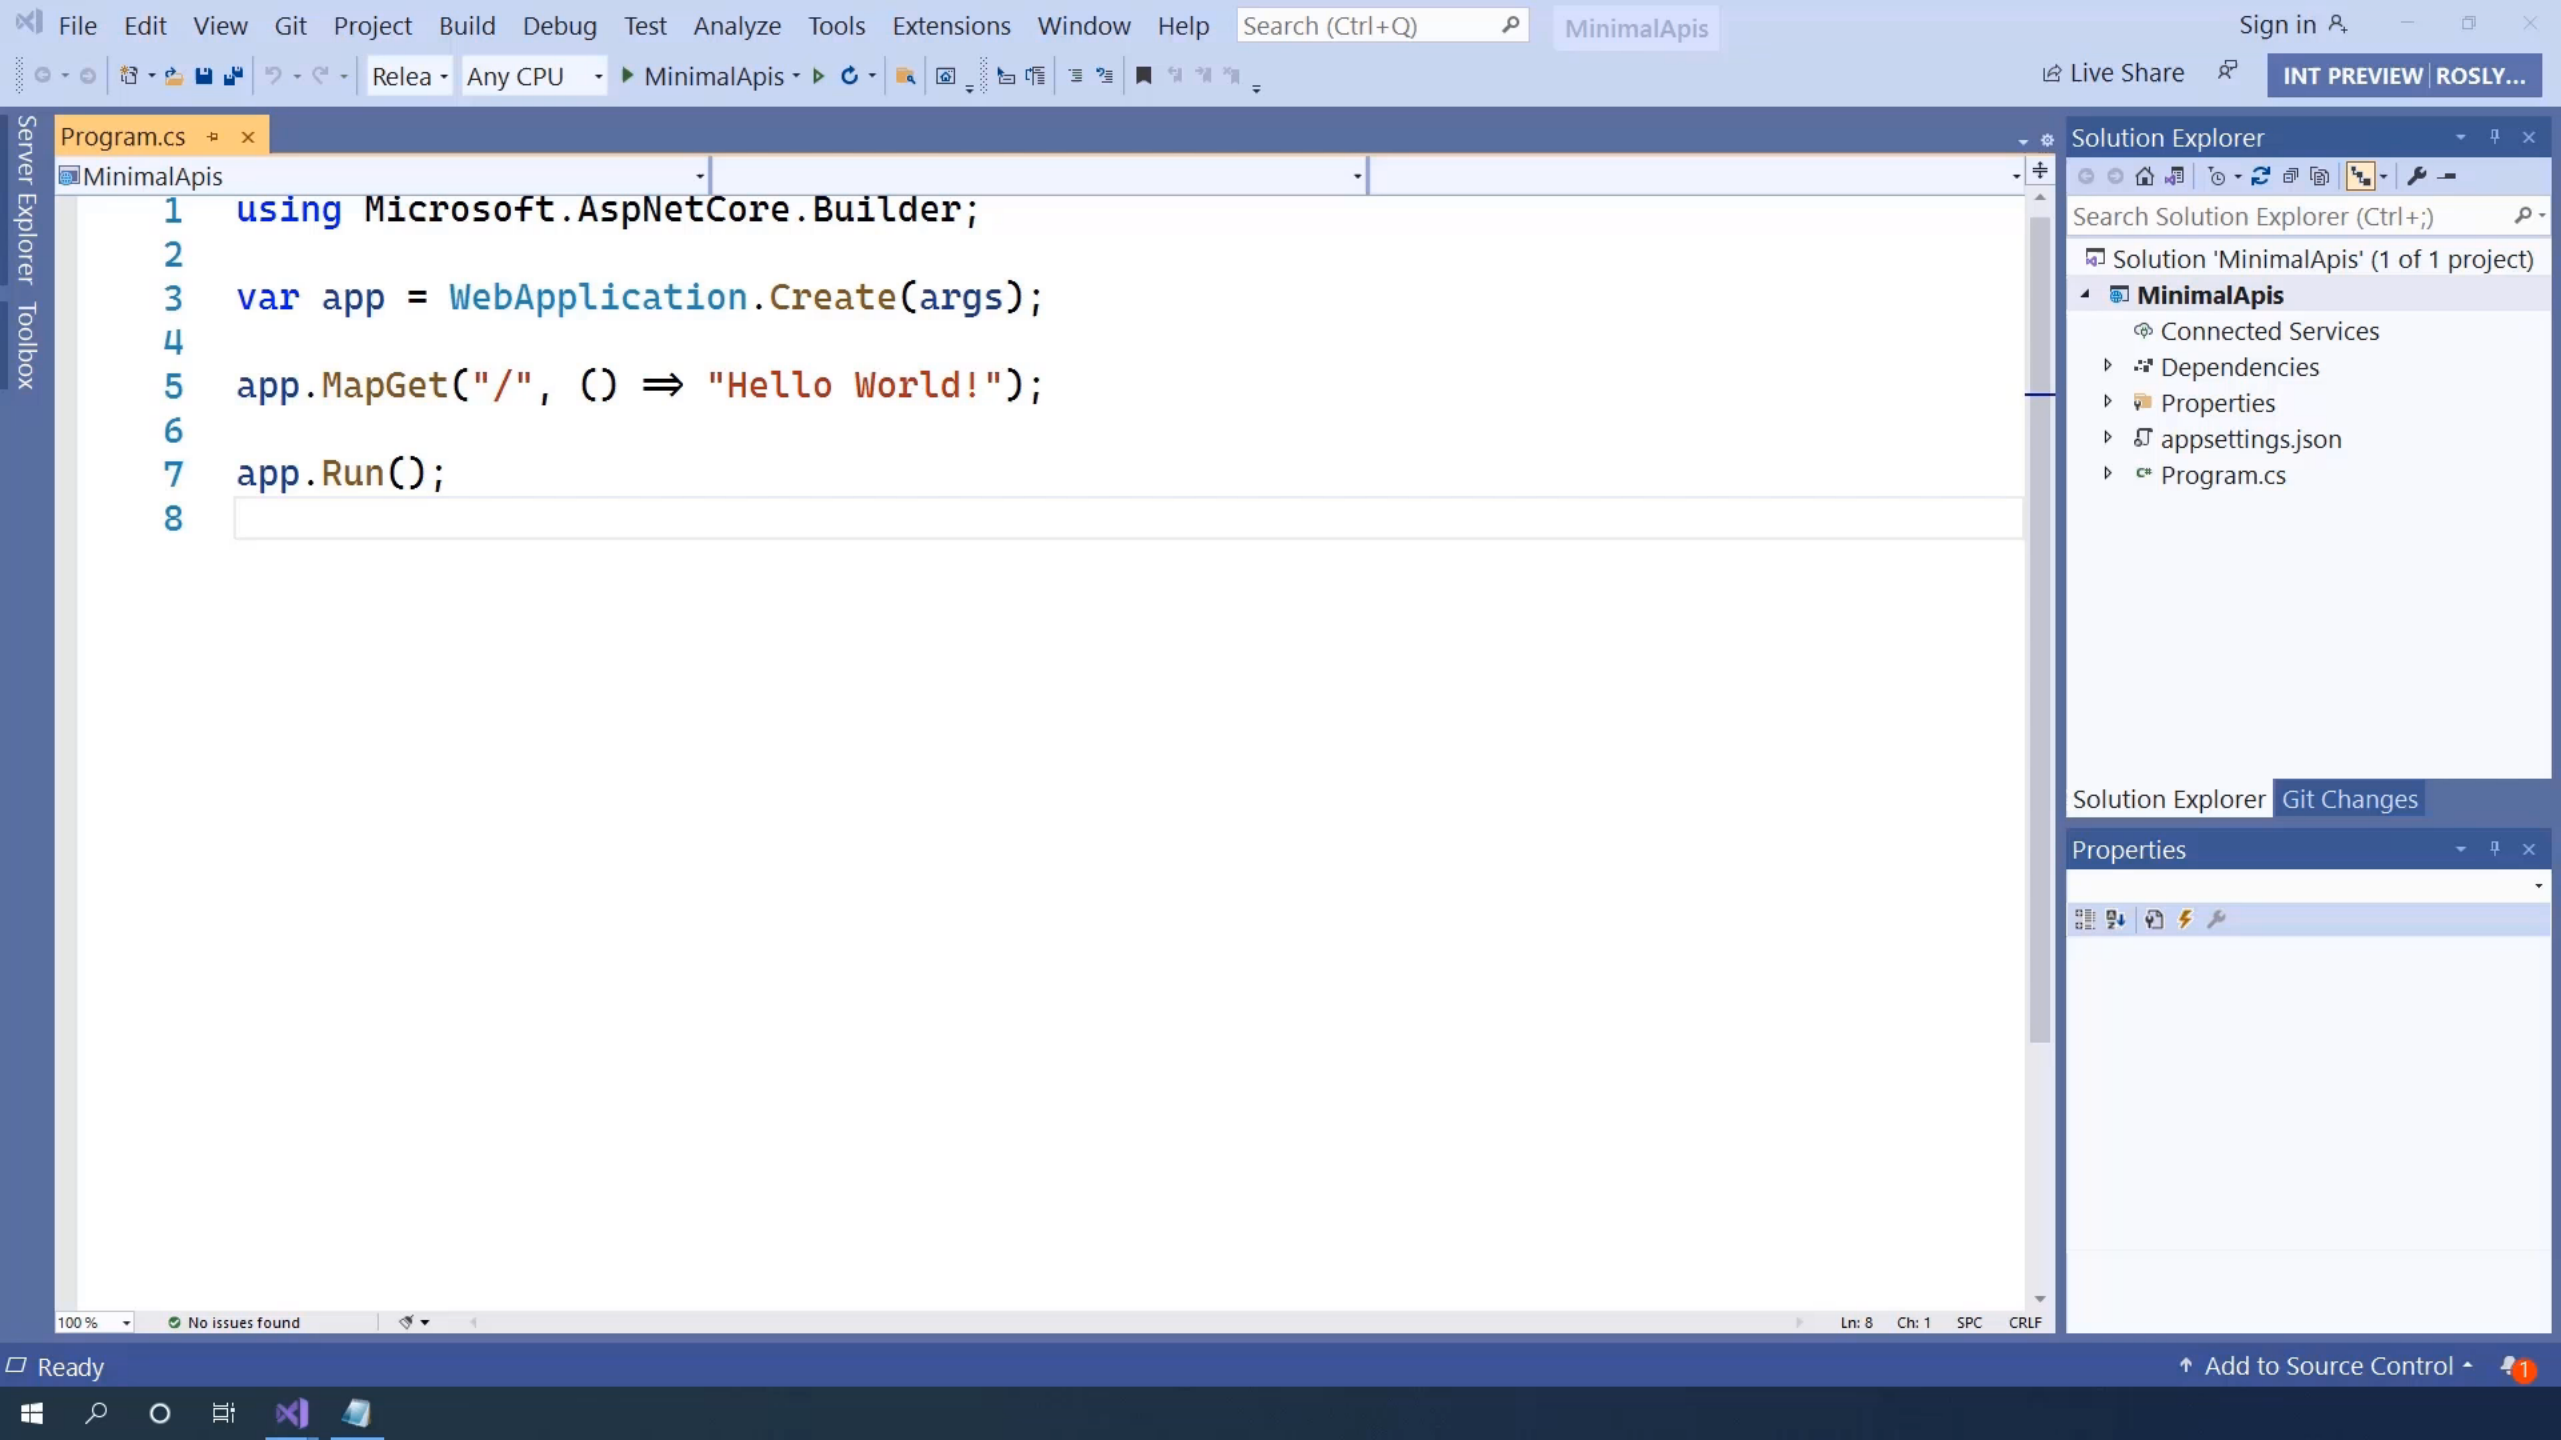

Path to MVC

General availability in .NET 6

Minimal code for minimal apps

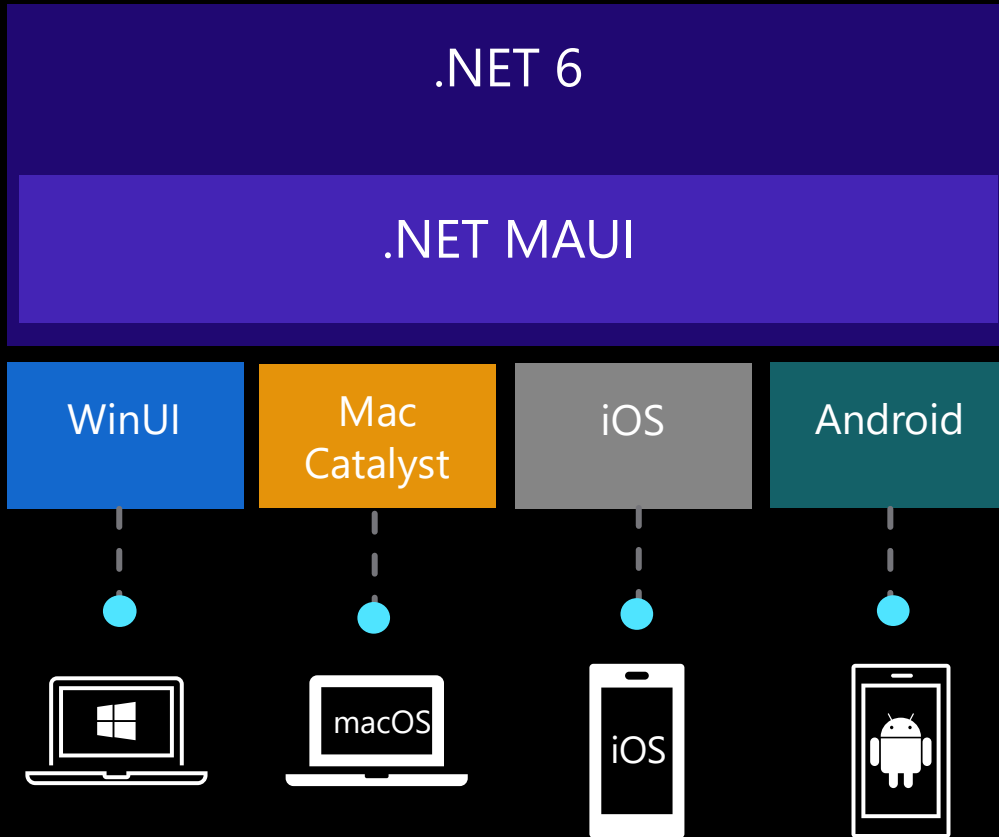

Demo – minimal web APIs

```
1 using Microsoft.AspNetCore.Builder;
2
3 var app = WebApplication.Create(args);
4
5 app.MapGet("/", () => "Hello World!");
6
7 app.Run();
8
```

.NET Multi-platform App UI

Cross-platform, native UI

Single project system, single codebase

Deploy to multiple devices, mobile & desktop

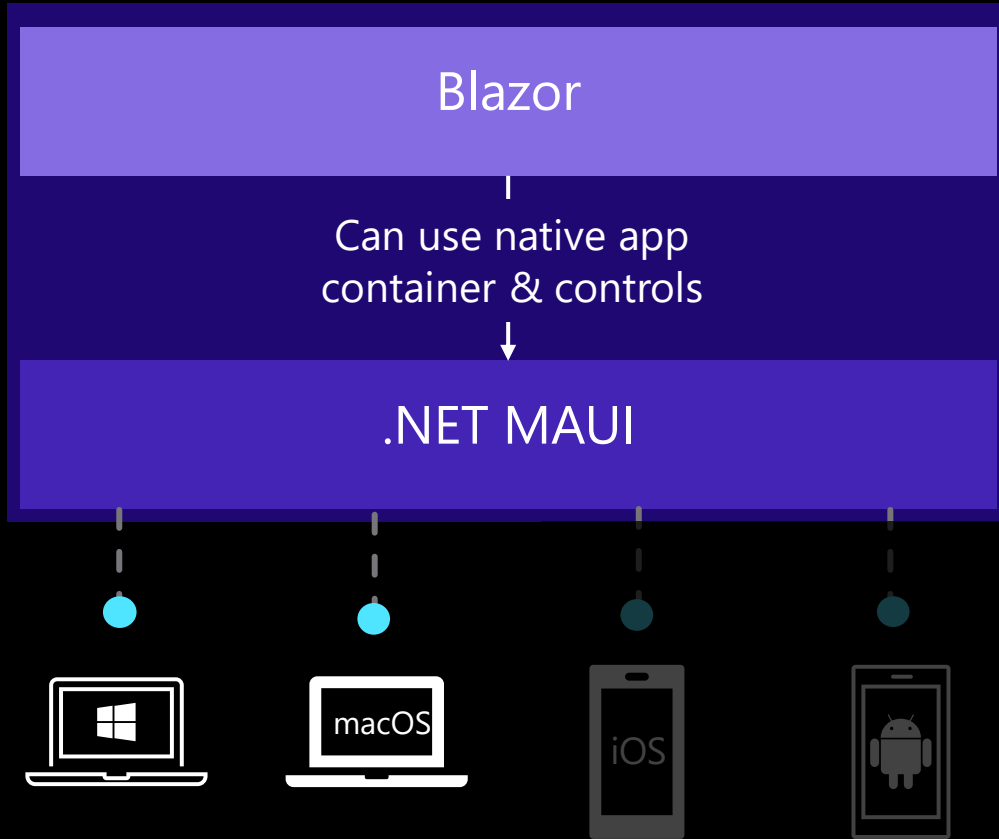

General availability in .NET 6

github.com/dotnet/maui

Demo – .NET Multi-platform App UI

Blazor desktop apps

Reuse UI components across native and web

Built on top of .NET Multi-platform App UI

Native app container & embedded controls

General availability in .NET 6

Demo –ASP.NET Core & Blazor

PREVIEW

.NET 6 Preview 4

.NET MAUI now supported in Visual Studio

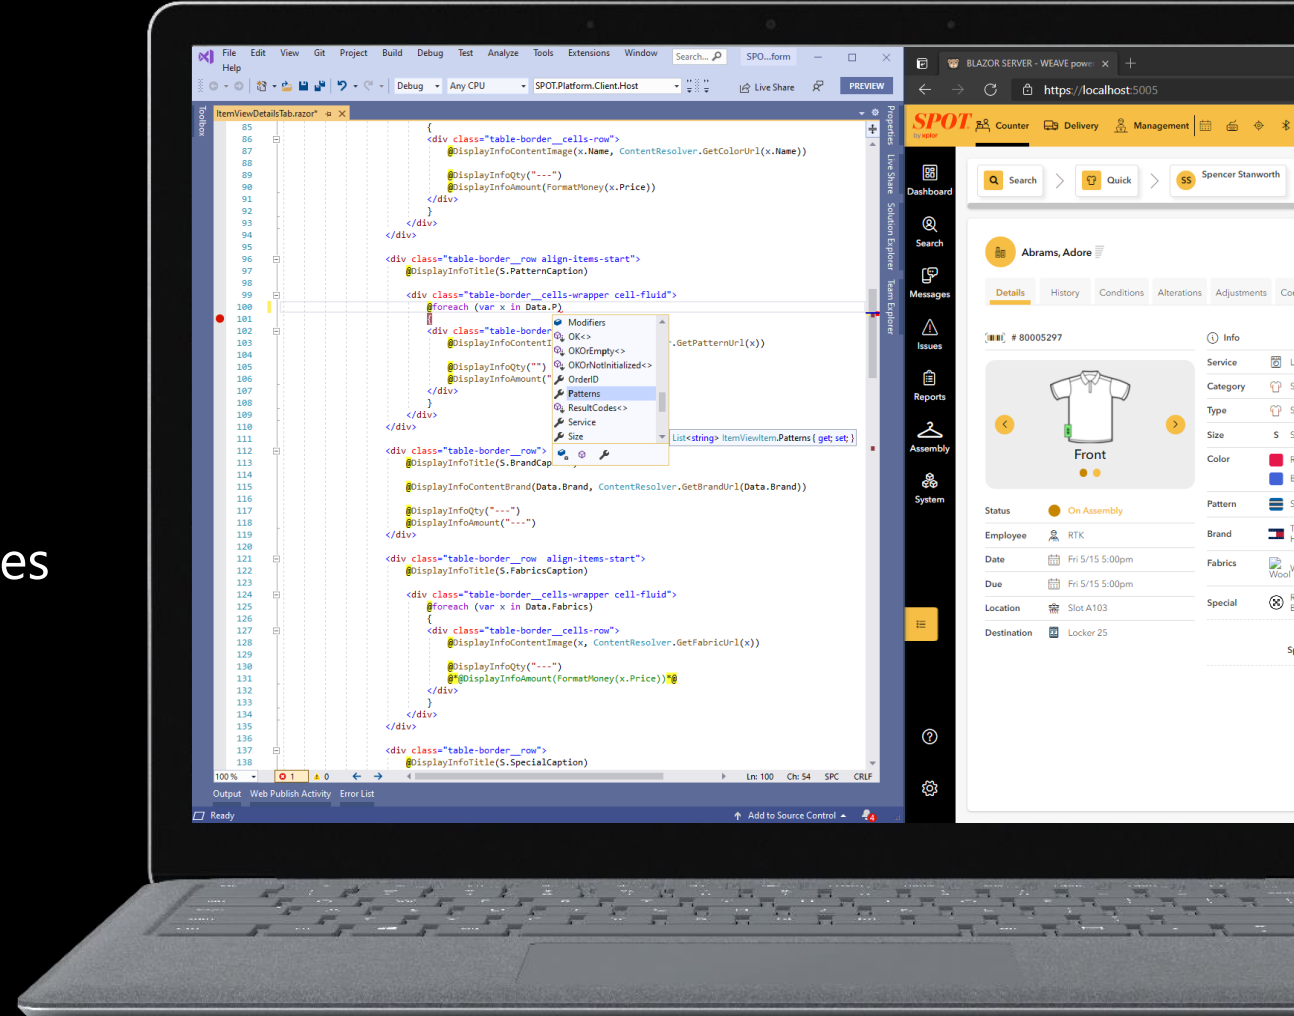

ASP.NET Blazor hybrid desktop apps

Minimal web APIs and smaller, faster microservices

More device targets, more flexible deployment

Performance and productivity improvements

Download | dot.net/get-dotnet6

NEW CAPABILITIES

ML.NET

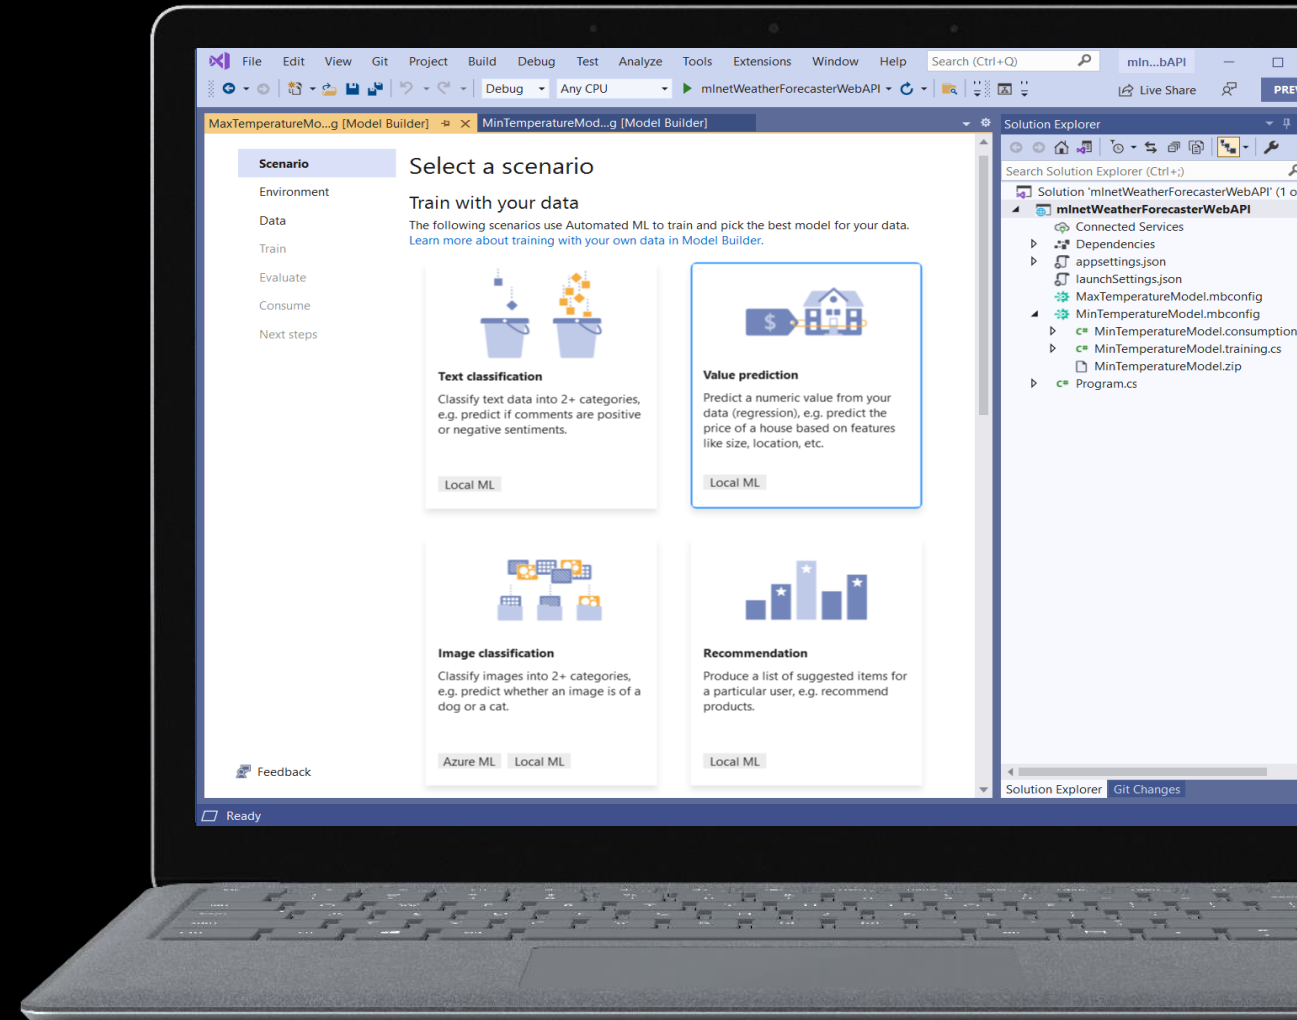

Now supports ARM64 and Apple M1

Config-based training enables saved training state

Model builder perf improvements

Improved AutoML
